# JobTaxonomy

Automatic industry sector / category recognition, and mapping based on job data. Online service analyses jobs content and adds relevant industry category data.

## Option 1: **Job Taxonomy API**

Job boards, ATSes, online recruitment services can send jobs XML data to JobTaxonomy API and obtain Industry category IDs mapped to jobs:

```xml
<job>
        <job_id>345678</job_id>
        <employer_company_name><![CDATA[Company Name]]></employer_company_name>
        <job_title><![CDATA[Director of marketing]]></job_title>
        <category><![CDATA["Marketing/Advertising/PR","Upper Management/Consulting"]]></category>
```

## Option 2: **Bundle With Job Wrapping service**

Job wrapping service integrated with JobTaxonomy scrapes jobs from source websites lacking Industry Category listings, recognizes and maps relevant Industry sectors, provides final jobs XML containing additional Industry category data.
